# AKEYLESS

Akeyless Password Manager

## An enterprise-ready password manager for your organization

The Akeyless Password Manager secures employee passwords with a simple browser extension and mobile app. With a single click, your employees can organize, create, access, and inject passwords into any website.

Unlock productivity across the organization with time-limited and one-time passwords that can be shared securely with employees and third-party contractors. Easily track when and how passwords are used with comprehensive audit logs.
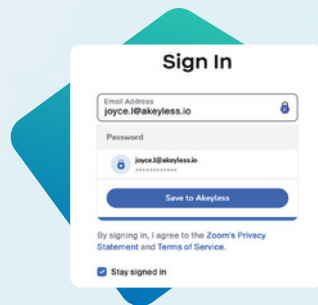

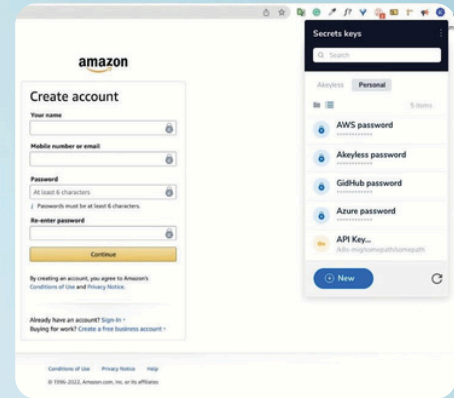

Easily generate and inject secure passwords into any website

## Enforce password generation policies across the organization
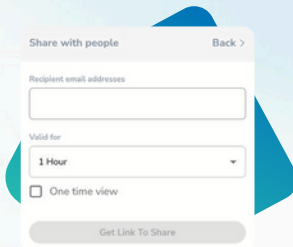

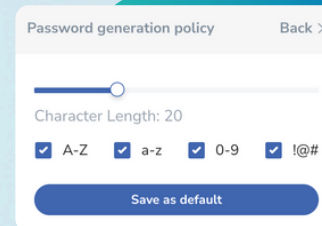

Powerful sharing features with time-limited access

Easily share a link with third parties that allows them time-limited, logged access for a one-time view or a specific time period.

A seamless experience across Web and Mobile

The same easy password management and comprehensive security whether on your laptop or phone.

AKEYLESS
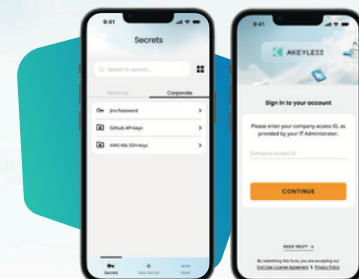

Benefits

✔ ## Comprehensive password management for the modern enterprise

Seamlessly extend your password management from everyday use cases to advanced enterprise-grade functionality

Employee Use Cases

- Store and inject passwords without extra effort
- Employee-friendly mobile and web application
- Easily generate strong passwords with a unique combination of symbols, numbers, and letters

Enterprise-grade Functionality

- Limited-time, tracked password sharing to easily limit access across the organization
- Granular role-based access control (RBAC) for in-depth permissions control
- Comprehensive log forwarding and audit trail for easy compliance
- Easier alignment with compliance requirements using enforced password policies across the organization

✔ ## The best in class security your passwords deserve

The Akeyless password manager leverages patented DFC™ technology to deliver enhanced security without sacrificing ease of use

- Patented DFC™ technology protects against breaches and enables zero knowledge
- Advanced NIST FIPS 140-2 validated cryptography to secure your passwords with full organizational control
- Comprehensive tracking of password-related activity

✔ ## Lower TCO and Higher Ease of Use

Up to 40% lower pricing than standalone password management tools

- Economical without sacrificing functionality
- Ideal for all business sizes
- Maintains critical features like 2FA and SSO
- Combines budget-friendly operations with top-tier security and ease of use

Elevate your enterprise's security and efficiency with the Akeyless Password Manager. Experience seamless password management, enhanced security with DFC™ technology, and effortless integration across devices.
